

Count and circle the number 1–5

Count the pictures in the row. Next to them are three numbers. Circle the one that tells how many pictures there are.

Recommended age: 4–5 years · counting

Tip for parents: Count out loud with a finger on each picture. If your child does not know the numerals yet, read the three choices and let them point. Answers: 3, 5, 1, 4, 2. Afterwards the pictures can be colored.

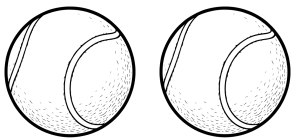

Count and trace the number 1-5

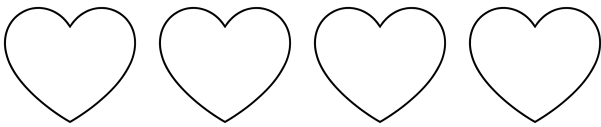

Count the pictures. Then trace the number next to them – start at the dot. In the empty box, try writing the number on your own.

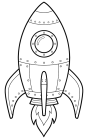

Recommended age: 4-5 years · counting

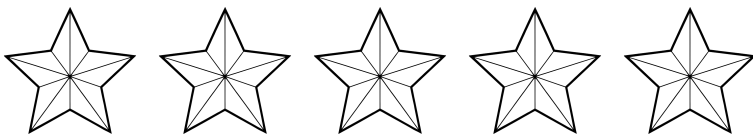

Name _____

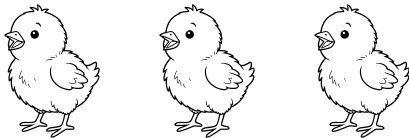

Date _____

Tip for parents: If the numeral in the empty box doesn't work out, that is fine. Praise the tracing and leave the box for next time. The brown dot shows where the stroke starts. If your child is only getting to know numerals, do "Count and circle" first.

Draw that many dots

Read the number on the left. In the box next to it, draw as many dots as the number says. Then count them to check.

Tip for parents: If your child draws too many dots, let them count and compare with the number. They usually spot the mistake themselves. Play the same game at the table: "Pass me four spoons."
